## Notes on Using "SMZ-Series Support Tools"

- **Upon first use of the SMZ-Series Support Tools, always perform microscope system settings with the setup function, and transmit this information to the microscope system using "SEND."**

- **When setup information is transmitted to the microscope system, this will overwrite the previous information held in its memory.**
  **We recommend that the information, including arbitrary registrations set up with the setup function or other setting function, be assigned a filename and saved on the PC side, after transmission.**
